# Ultra-Rugged GSM Tracker

## Asset Tracking Terminal

Weld-on and impact-resistant, the Ultra-Rugged GSM Tracker from Honeywell Global Tracking offers cutting edge security and management support for business property – ensuring your assets are never out of your sight, wherever in the world they may be. Specially designed for minimum power usage, the Ultra-Rugged GSM Tracker devices easily outlive the 5-year lifespan of an average asset – with batteries that last for up to 10 years.

The presence of an Ultra-Rugged GSM Tracker on your asset deters theft from the outset, and its patented impact-resistant casing means once it's on, it's there to stay – it's even bulletproof. So should your asset be moved without your consent, the Ultra-Rugged GSM Tracker will move with it, and alert you instantly via your choice of SMS or email.

Our easy-to-use system lets you set time and location-specific parameters for every asset you own. You'll always know the exact location of your property – even in the event of unexpected activity. With each device comes access to your own online console, offering your business a whole host of management tools to boost efficiency – from instant access to the full hire history of any asset (including every journey it has made, and even its individual profitability), to simplified customer billing and job allocation.

The Ultra-Rugged GSM Tracker is suitable for tracking trailers, containers, agricultural machinery, heavy equipment and more.

## Features

- **Ultra-rugged device:** Virtually indestructible casing constructed of kevlar, steel and resin
- **Superior battery performance:** The internal Lithium-Metal battery will last up to 10 years (1 ping/day)
- **Affordable Connectivity:** The internal Quad-band GSM SIM card offers affordable data rates – even when your asset travels internationally
- **Deployment Environments:** Transport & Logistics, Field Services. (Tracking of Trucks, Vehicles, Trailers, Containers, Agricultural machinery, Heavy equipment and more)
- **Convenient Online Access:** View asset location and history in a standard browser
- **Hassle-free:** Weld or bolt the Tough Tracker to an asset and that's it. You're done! No maintenance required
- **Optional 3-Axis Accelerometer:** Provides ultra-sensitive motion detection. (Off by default. Enabling the accelerometer will reduce battery life.)

# Ultra-Rugged GSM Tracker Technical Specifications

Physical	
Dimensions	18cm x 17.5cm x 7cm
Weight	3.2 kg
Casing	Patented armoured composite polymer case with integral steel shielded battery compartment Welded stainless steel back plate for mounting on assets All active components fully protected in polyurethane encapsulating compound
Environmental	
Operating Temperature	-40°C to +50°C
Power	
Batteries	Ultra high capacity Lithium Metal battery technology Extra low power consumption with deep sleep circuit technology Capable of up to 10 years of battery life, subject to usage
Connectivity	
Active Components	GPS satellite positioning system Quad band GSM transmitter with cell location function
Applications	
Tracking	Trucks, Vehicles, Trailers, Containers, Agricultural machinery, Heavy equipment and more

*Note: Product specifications are preliminary and subject to change.*
